WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

January 24, 2023

Severe Weather Outlook

- Severe thunderstorms will erupt across the southern United States, targeting areas from Texas to North Carolina Tuesday into Wednesday evening, AccuWeather forecasters warn.
- The thunderstorms will pose dangers including flooding rainfall, damaging wind gusts and isolated tornadoes, and the threats will continue into the nighttime hours.
- The storm system emerged from the southern Rocky Mountains and pushed into Texas Monday night.
- The potent and strengthening storm was already responsible for more than 20,000 power outages in the Lone Star State prior to daybreak, according to PowerOutage.us.
- The primary concern across central Texas on Tuesday will likely be substantial rainfall and powerful wind gusts.
- However, as the afternoon and evening progress, AccuWeather meteorologists say that locations farther east along the Gulf Coast of Texas, Louisiana, central and southern Mississippi and Alabama will face additional threats.
- More than 36 million people were under a National Weather Service wind advisory, high wind watch or high wind warning on Tuesday in the Southern states.
- There is the potential for some damaging tornadoes to be concealed by heavy rain.
- Cities with a high risk of severe weather that includes the potential for a strong tornado include Houston and Port Arthur, Texas, as well as Lake Charles, Louisiana, on Tuesday afternoon.
- Cities facing a moderate risk for severe weather from Tuesday evening through Tuesday night include Baton Rouge and New Orleans, Louisiana, Mobile, Alabama, and Pensacola, Florida.
