Volcano & Earthquake Activity

Hawaii

- The Kilauea volcano on Hawaii's Big Island has erupted, the U.S. Geological Survey said.
- The eruption began late Sunday within the within Halema'uma'u crater. The volcano is located within Hawaii Volcanoes National Park.
- A magnitude 4.4 earthquake hit about an hour after the volcano began erupting. The USGS said it received more than 500 reports of people who felt the earthquake but significant damage to buildings or structures was not expected.
- There have been more than 20 earthquakes in the vicinity of Fern Forest from M2.0 to M4.4; no tsunami advisories issued.
- An advisory was issued by the National Weather Service in Honolulu, warning of fallen ash from the volcano. Excessive exposure to ash is an eye and respiratory irritant, it said. The agency later said the eruption was easing and a "low-level steam cloud" was lingering in the area.
- Kilauea erupted in 2018, destroying more than 700 homes and spewing enough lava to fill 320,000 Olympic-sized swimming pools. An area more than half the size of Manhattan was buried in up to 80 feet of now-hardened lava. The lava flowed over the course of four months.

Pending Individual Assistance Declaration Request 12/21/2020

State	Event	Date Submitted	Approved/Denied /Pending	Number of Counties/Tribes
WA	Wildfires & Straight-Line Winds Sept 6 & continuing	9/16/2020	Pending	1 County
LA	Hurricane Zeta October 26-29	11/24/2020	Pending	6 Parishes
MS	Hurricane Zeta October 28-29	11/24/2020	Pending	6 Counties
