WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

June 24, 2021

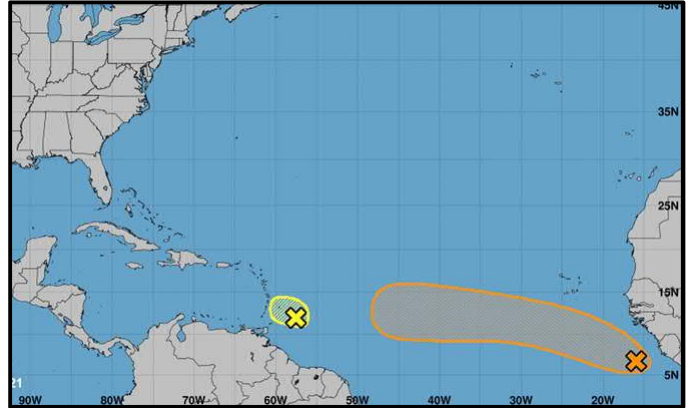

## Tropical Activity (Atlantic)

### Disturbance 1 (As of 8:00 a.m. ET)

- 200 miles E of Barbados
- Further development unlikely
- 48-hour formation chance: Low (10%)
- 5-day formation chance: Low (10%)

### Disturbance 2 (As of 8:00 a.m. ET)

- Tropical wave expected to emerge off the coast of Africa
- Small tropical depression could form next week
- 48-hour formation chance: Low (near 20%)
- 5-day formation chance: Low (40%)

## Severe Weather

- A potentially historic multi-day heat wave will take hold in the Northwest this weekend and last into early next week with dangerous triple-digit highs threatening all-time records in parts of Washington, Oregon and Idaho.
- That's because a hot dome of high pressure will build into the region as the jet stream takes a far-north arcing path into western Canada. This heat dome may be record strength for this area for this time of year, or any time of year.
- Sinking air underneath this high-pressure system will send high temperatures soaring more than 20 or even 30 degrees above average by this weekend and lasting into early next week.
- Beginning Saturday, highs in the 100s will be common not just in the drier interior of the Northwest, but also west of the Cascades in western Oregon and possibly parts of western Washington.
- Portland, Oregon, will see highs soar above the century mark beginning Saturday, continuing through Monday.

WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

June 24, 2021

## Tornado Activity

### Illinois

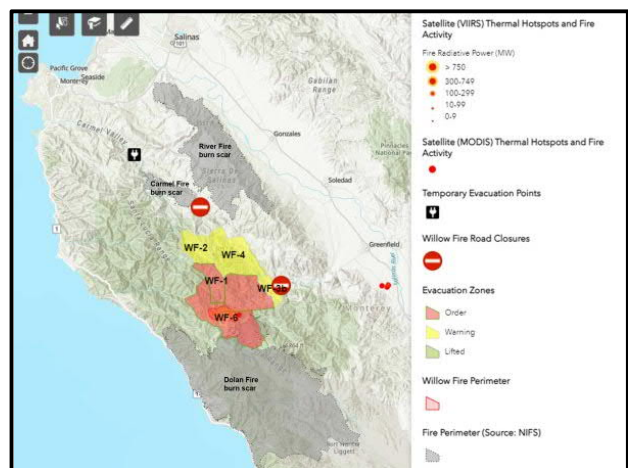

- Nearly 400 homes in suburban Woodridge were damaged in a tornado that tore through the area on Sunday night, with more than two dozen homes considered to be a “complete loss,” according to officials.
- According to a press release sent out Wednesday, officials have completed approximately 90% of their damage assessment from Sunday’s storm, which spawned an EF-3 tornado that hit multiple communities, including Woodridge.
- A total of 28 homes are considered to be a “complete loss” after the storms, according to officials. A total of 156 homes in the community suffered “major damage,” meaning that repairs to the homes will require a building permit to address.
- In all, 380 homes suffered at least some damage from the twister, which tracked 16 miles through Chicago’s western suburbs.
- In nearby Naperville, at least 231 structures sustained damage, with a total of 20 homes left uninhabitable after the storm.

## Wildfire Activity

### Willow Fire

- The Willow Fire in the Ventana Wilderness of the Los Padres National Forest is 13% contained with 2,877 acres burned so far after firefighters took advantage of continued favorable weather conditions and moderate fire activity.
- The Willow Fire was first reported a week ago and its cause remains under investigation. There are 526 fire personnel combating the blaze including hotshot crews, hand crews, and air support. No injuries or fatalities have been reported.
- The Monterey County Sheriff’s Office remains in Unified Command with Los Padres National Forest and California Interagency Incident Management Team 11. There are no changes to the Evacuation Warning and Order areas.
