WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

January 13, 2022

## Major Winter Storm Outlook

- A mix of wintry conditions is expected to impact tens of millions of people across different regions of the U.S. over the holiday weekend, including snow and ice in parts of the Southeast as the storm is forecast to plunge through Virginia and Kentucky, reaching as far south as Georgia.
- The biggest threat in the Southeast from this storm, however, will be from freezing rain, AccuWeather forecasters caution.
- "While much is going to be said about the snow across much of the central and eastern part of the country with our latest winter storm," AccuWeather Chief Meteorologist Jonathan Porter said, "I want to make sure we don't lose track of the significant ice storm risk."
- Porter pointed to "parts of North and South Carolina as well as portions of Virginia where amounts could easily exceed half an inch of ice" as places that could face the biggest threat from icy precipitation.
- "This situation is similar to a number of previous ice storms across the region, and for that reason, we at AccuWeather are increasingly concerned about a major ice storm from northern Georgia through the Carolinas and into central Virginia," AccuWeather Meteorologist Randy Adkins said. "The area of greatest risk appears to be from upstate South Carolina through western Piedmont of North Carolina ... potentially including Charlotte."
- Extended power outages are possible in this region as tree limbs snap and power lines are weighed down by ice accumulation. People who live in this zone should prepare sooner rather than later for potential power outages that last into the start of next week.

## Pending Individual Assistance Declaration Request

State	Event	Date Submitted	Approved/Denied /Pending	Number of Counties/Tribes
TN	Severe Storms, Straight-Line Winds & Tornadoes Dec 10-11, 2021	12/28/2021	Pending	12 Counties
