WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

April 21, 2023

## Severe Weather Outlook

- Severe thunderstorms will advance into the southern and eastern United States late this week and into this weekend, continuing a multiday outbreak of severe weather that has already spawned multiple tornadoes and damaging thunderstorms this week.
- Ahead of the storm and front, a warm and somewhat humid air mass will help provide fuel for the development of thunderstorms on Friday and Saturday from the Mississippi Valley to the East Coast, according to AccuWeather meteorologists.
- Destructive wind gusts over 60 mph, damaging hail, torrential downpours and even a few tornadoes will all be possible across more than a dozen states.
- The cities of Houston, Memphis and New Orleans are among those that can experience a severe thunderstorm during the daytime hours on Friday. In Nashville, the threat of gusty storms will wait until after dark on Friday night.
- "As the cold front moves east of the Appalachians and collides with the unseasonably warm air in place across the East on Saturday afternoon, thunderstorms can once again bring damaging winds and hail," said AccuWeather Senior Meteorologist Adam Douty. "The greatest risk will be across the central and eastern Carolinas and into southern Virginia."
- Damaging winds of 60 to 70 mph and hail the size of quarters (an inch in diameter) or greater — will again be a big concern for those with outdoor weekend plans, but a greater risk of tornadoes may also exist on Saturday in comparison to Friday.
- Forecasters say although the greatest threat for severe weather will focus on cities such as Charleston, South Carolina; Charlotte and Raleigh, North Carolina, Richmond, Virginia; and Washington, D.C., areas farther north in the mid-Atlantic won't avoid the storm risk entirely.

## Joint Preliminary Damage Assessments

State	Event	Number of Counties for IA		Start-End
		Requested	Completed
