WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

June 1, 2023

## Tropical Activity

### Atlantic – Invest 91L

- The National Hurricane Center (NHC) has significantly increased the chances of development for a tropical disturbance in the Gulf of Mexico as Florida braces for heavy rain and gusty winds late this week.
- Showers and thunderstorms associated with the tropical disturbance have become better organized Thursday morning, and the NHC said environmental conditions appear marginally favorable for additional development over the next day or so.
- Therefore, a short-lived tropical depression or tropical storm could form while the system meanders over the northeastern Gulf of Mexico.
- If the system does develop into a tropical storm, it would be named Arlene.
- According to the NHC, Invest 91L in the northeastern Gulf of Mexico has a medium chance of development, with the odds currently placed at 50-50 over the next two days.
- The Hurricane Hunters said Wednesday they plan to begin flying into the storm on Thursday, with the first mission scheduled to depart at 1:45 p.m. EDT. A second mission is scheduled to take off at 6:15 a.m. EDT Friday.
- Regardless of how this system develops, Florida will get plenty of rain and wind as a result. Upwards of 3 inches of rain is possible across parts of the Florida Peninsula by the weekend.
- The 2023 Atlantic hurricane season officially begins today.
