WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

May 6, 2022

Severe Weather Outlook

- After the central U.S. was battered by tornadoes and volatile weather earlier this week, the Southeast is facing severe weather Friday.
- "Explosive severe weather is set to continue as hail, tornadoes, flash flooding and damaging wind gusts will threaten communities across the Southeast," said AccuWeather Meteorologist Jessica Storm.
- A large swath of the U.S. extending from the Southeast to the mid-Atlantic is expected to be affected by a low-pressure system with thunderstorms, according to the National Weather Service.
- This area most at risk extends from southeastern Louisiana northward to Kentucky and eastward to the I-95 corridor, according to AccuWeather. Parts of Alabama, Georgia, the Carolinas and Virginia are expected to see a more moderate threat of severe weather.
- The Southeast may also see a few scattered tornadoes with southern Virginia and northern North Carolina facing the greatest risk, as well as upstate South Carolina through west-central Georgia and east-central Alabama, AccuWeather said.
- Rainfalls of up to 3 inches could also cause scattered flooding in these areas, the weather service said.

Tornado Activity

Kansas (April 29th)

- A powerful tornado tore through the Wichita, Kansas, area last Friday night, leveling dozens of structures in the city of Andover, according to officials.
- The twister touched down in Sedgewick County before traveling to Andover in Butler County.
- The tornado was rated an EF-3, generated winds up to 165 mph and carved a path of destruction nearly 13 miles long.
- The American Red Cross' Kansas-Oklahoma Region said Thursday that it has completed 220 damage assessments on structures affected by the Andover tornado.
- Of those, 53 homes were destroyed, 36 sustained major damage, 44 had minor damage and 72 were otherwise affected.
