WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

November 20, 2023

## Tropical Activity

### Atlantic – Disturbance 1

- Located over the central Caribbean Sea.
- Significant development not likely.
- Formation chance – 48-hour: Low (10%); 7-day: Low (10%)

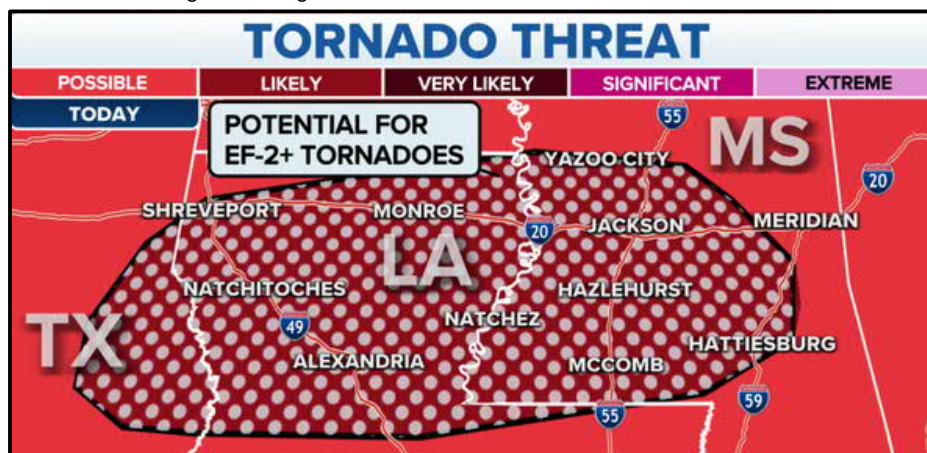

### Atlantic – Disturbance 2

- Located over the central portion of the Atlantic basin.
- Conditions appear somewhat conducive for gradual development later this week.
- Formation chance – 48-hour: Low (near 0%); 7-day: Low (30%)

## Severe Weather Outlook

- A strong storm system making its way across the country will bring the possibility of severe weather from Texas to Florida to start the workweek.
- The Storm Prediction Center has highlighted the areas of northern Louisiana and central Mississippi, including Alexandria and Jackson, for an enhanced (3 out of 5) risk for severe thunderstorms Monday afternoon through the evening hours.
- The primary threat will be damaging wind gusts and the potential for strong EF-2 tornadoes, though isolated hail will also be possible.
- Shreveport, Louisiana and Texarkana, Texas will be the first major cities under the threat of strong storms that fire up along the approaching cold front.
- The threat for supercell storms is also possible ahead of the front, which would greatly enhance the severe threat for the region. These storms will continue moving east, and more supercell storms are likely to break out across Central Louisiana.
- This narrow corridor of storms will trek toward Jackson, Mississippi shortly after sunset, increasing the threat for dangerous nighttime storms.
