

DAILY DART

WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

May 27, 2022

Severe Weather Outlook

- Some turbulent weather during the hours before the kickoff of Memorial Day weekend is poised to create dangerous situations and disrupt travel across the mid-Atlantic as a tornado watch was issued for Washington, D.C., Baltimore and parts of four states early on Friday.
- A massive and slow-moving storm system that brought flooding downpours and locally violent thunderstorms to the Ohio and Tennessee valleys, as well as the southern Appalachians, on Thursday will complete its journey to the East Coast on Friday, AccuWeather meteorologists warn.
- A line of strong storms, stretching from northern South Carolina to northern Virginia was spotted on radar moving northeastward Friday morning.
- These storms prompted a tornado watch and several tornado warnings for parts of North Carolina, Virginia, Maryland, Washington D.C, and a small sliver of West Virginia Friday morning. The tornado watch is expected to end early Friday afternoon.
- Even though the storm system will bring a wet start and a small area of locally severe weather to the Northeast on Saturday, AccuWeather forecasters expect conditions will improve substantially by Sunday across much of the eastern United States.

Tropical Activity

East Pacific

- The 2022 East Pacific hurricane season began less than two weeks ago on May 15, and AccuWeather meteorologists are already tracking one area of interest in the basin.
- Forecasters say one zone stands a significant chance of spawning the first named storm of the season, which may go on to strike southern Mexico during the last days of May.
- Satellite imagery on Wednesday depicted several large clusters of showers and thunderstorms roaming the waters south of Mexico.
- On Thursday, those scattered storms continued to largely remain offshore from Mexico's Pacific Coast.
- Some slight spin was noted in the mass of clouds, which could indicate the early stages of tropical development. Forecasters expect this trend to continue into the weekend.

DAILY DART

WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

May 27, 2022

- While strong wind shear is inhibiting tropical development across the Gulf of Mexico and the Caribbean Sea, lighter wind shear to the south of Mexico across the eastern Pacific Ocean will support more favorable conditions for tropical development into the end of the month.
- The first name on the list for the 2022 eastern Pacific hurricane season is Agatha.

Joint Preliminary Damage Assessments

State	Event	Number of Counties for IA		Start-End
		Requested	Completed	
WV	Severe Storms & Flooding May 6	2	1	5/24-TBD
MI	Tornado May 20 & continuing	1	1	5/25-5/26

Pending Individual Assistance Declaration Request

State	Event	Date Submitted	Approved/Denied /Pending	Number of Counties/Tribes
