WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

October 10, 2023

Tropical Activity

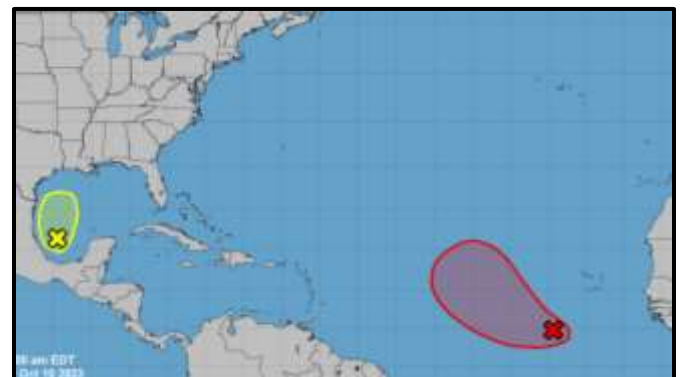

Typhoon Bolaven

- Typhoon Bolaven pummeled the U.S. territories of Guam and the Northern Mariana Islands Tuesday evening local time, lashing the islands with up to 65-80 mph winds, torrential rains and pounding surf.
- But the islands dodged a bullet as the Bolaven's eyewall managed to miss making any direct hits.
- The storm passed about 50 miles north of Guam Tuesday afternoon, where Tropical Storm Warnings remain in effect, with its center scraping just 20 miles north of the island of Rota.
- Typhoon Warnings remain posted for Rota, Tinian and Saipan in the Northern Mariana Islands as the storm slowly pulls away from the islands Tuesday night.
- At 7 pm, Bolaven was located 35 miles north of Rota and 35 miles south of Tinian with maximum sustained winds at 80 mph.
- Bolaven is forecast to intensify, possibly rapidly, to a category 3 or 4 typhoon sometime Wednesday night or Thursday morning.

Eastern Atlantic – AL92

- A broad area of low pressure located several hundred miles southwest of the Cabo Verde Islands continues to produce a large area of showers and thunderstorms. Environmental conditions appear conducive for gradual development, and a tropical depression is likely to form during the next couple of days while the system moves west-northwestward or northwestward across the eastern tropical Atlantic.
- Formation chance through 48 hours...high...70 percent.
- Formation chance through 7 days...high...80 percent.

Southwest Gulf of Mexico – AL93

- Showers and thunderstorms have increased some, but remain disorganized, in association with an area of low pressure over the southwestern Gulf of Mexico.
- While environmental conditions appear only marginally favorable, surface pressures have been falling near the system, and it has a short window to develop further over the next day or so.

WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

October 10, 2023

- However, by Wednesday morning the system is forecast to merge with a developing frontal system over the western Gulf of Mexico.
- An Air Force Reserve Reconnaissance aircraft is scheduled to investigate the system later today, if necessary.
- Regardless of tropical cyclone development, the system is forecast to produce gale-force winds over portions of the northern Gulf of Mexico by Wednesday, and potentially heavy rainfall along the Gulf Coast by the latter portion of this week.
- Formation chance through 48 hours...low...30 percent.
- Formation chance through 7 days...low...30 percent.

Joint Preliminary Damage Assessments

State	Event	Number of Counties for IA		Start-End
		Requested	Completed	
PA	Flooding Sep 9-10	1	1	10/2-10/4
MA	Flooding Sep 11-13	2	0	TBD
IL	Flooding Aug 17	1	0	10/11-TBD

Pending Individual Assistance Declaration Request

State	Event	Date Submitted	Approved/Denied/ Pending	Number of Counties
OH	Train Derailment Feb 3-8, 2023	7/3/2023	Pending	1 County
AR*	Severe Storms, Straight-Line Winds & Tornadoes June 25, 2023	8/23/2023	Pending	7 Counties
WA	Wildfires	10/4/2023	Pending	1 County

*Award of task order to contractor pending
