WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

July 24, 2023

Tropical Activity

Atlantic – Disturbance 1

- A low-pressure system that's approaching the Caribbean still has a chance to become a tropical depression, but the window for that to happen is beginning to close.
- The system is centered several hundred miles east of the Lesser Antilles and is tracking toward the west.
- The NHC has given Invest 95L a low chance of development over the next seven days. That's a decrease in development chances when compared to previous outlooks issued since late last week.
- This particular system has been battling dry air over the last several days. That has prevented thunderstorms from being able to persist near a well-defined circulation center long enough for a tropical depression to form.
- Formation chance – 48 hour: Low (20%); 7-day: Low (20%)

Joint Preliminary Damage Assessments

State	Event	Number of Counties for IA		Start-End
		Requested	Completed	
NY	Severe Rain & Flooding	2	0	7/22-TBD
IL	Severe Storms & Flash Flooding	1	0	7/24-TBD
