WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

May 25, 2022

## NOAA's 2022 Atlantic Hurricane Season Outlook

- The 2022 Atlantic hurricane season is expected to be busier than average for the seventh year in a row, according to a government forecast released Tuesday.
- NOAA's Climate Prediction Center expects anywhere from 14 to 21 named storms, six to 10 of which become hurricanes and three to six of which reach Category 3 status or stronger, according to the outlook.
- Put another way, NOAA said there's a 65% chance the season is more active than average, and only a 10% chance it's below average.
- This largely agrees with the outlooks issued earlier by Colorado State University's Tropical Meteorology Project as well as The Weather Company, an IBM Business, and Atmospheric G2.
- The outlooks cite the increasing likelihood of La Niña persisting into a third straight year and warmer than average water temperatures in parts of the Atlantic Basin among the indicators for another active hurricane season.
- Todd Crawford, the author of the TWC/AG2 outlook, says it can best be summarized as "active, similar to 2021, nothing like 2020." The 2021 Atlantic hurricane season had 21 named storms and seven hurricanes.
- NOAA's Climate Prediction Center will update the 2022 Atlantic seasonal outlook in early August, just prior to the historical peak of the season.
